

Using a file explorer/text editor (like Fx), you may edit the OpenCPN configuration file manually.

First, close OpenCPN.

Then, open the file `opencpn.conf` with a text editor.

It will likely be located at `/mnt/sdcard/Android/data/org.opencpn.opencpn/files/opencpn.conf`

But you may need to search around for it.

Find the key like this:

```
InitChartDir=/storage/emulated/....
```

And edit this line manually to be:

```
InitChartDir=
```

Save the file, and restart OpenCPN.

You should now be able to navigate to the directory containing your cm93 cells.

Please let me know how this goes, so that I can confirm my permanent patch.
